```
Question 1
Correct
Mark 1.00 out of 1.00
```

```
Convert the following algorithm into a program and find its time complexity using counter method.
Factor(num) {
    for (i = 1; i <= num;++i)
        {
        if (num % i== 0)
            {
             printf("%d ", i);
            }
        }
    }
}</pre>
Note: No need of counter increment for declarations and scanf() and counter variable printf() statement.

Input:
A positive Integer n
Output:
Print the value of the counter variable
```

Answer:

```
#include<stdio.h>
    int main()
 3 ▼ {
 4
        int num;
 5
        int count=0;
        scanf("%d",&num);
 6
 7
 8
        for (int i = 1; i \leftarrow num; ++i)
 9
         { count++;
10
          if (num % i== 0)
11 .
               //printf("%d ", i);
12
13
               count++;
14
15
             count++;
          }
16
17
          count++;
          printf("%d",count);
18
19
```

| | Input | Expected | Got | |
|---|-------|----------|-----|---|
| ~ | 12 | 31 | 31 | ~ |
| ~ | 25 | 54 | 54 | ~ |
| ~ | 4 | 12 | 12 | ~ |

Passed all tests! 🗸

Correct

Marks for this submission: 1.00/1.00.
